Eastern	Eastern Region	Civils Drainage Minor Works and Examinations Framework Agreement	N/A A 5-year framework within the Eastern Region for site investigations and surveys required to identify remedial proposals, preparation of outline and detail designs, and delivery of implementation works, to mitigate minor and major drainage and culvert issues. Works will be required to all parts of the Network Rail infrastructure including station buildings, lineside buildings, MDU's and across third party land if necessary. This includes: •Drain and culvert maintenance •Design – temporary and permanent •Track drainage Under Track Crossings •Embankment drainage •Slope drainage •Embedded earthwork drainage •Soakaways or outfalls •Tunnel drainage •Ancillary Civils works including fencing and headwall protection barriers •Temporary or Emergency works •Cleaning and associated Examination of Culverts •Cleaning and associated Examination of Drains
Eastern	East Midlands	Luton Town Station AFA footbridge	130874 Access For All Stn improvements
Eastern	North & East	MVL3/40T Standedge Tunnel (G2)	165217 Undertake GRIP stages 3 to 8 to design and implement a solution that will arrest ongoing movement and will maintain the long term stability of the three railway bores (MVL3/40, MVL3/41 & MVL3/41A) at Standedge Tunnel between tablets 250 and 290 (Full Profile Up & Down). The three main areas of concern are tablets 262, 280 and 288. Existing monitoring information should be reviewed and validated as part of the scheme and solutions proposed to address the areas of highest movement on a priority basis. The global impact of the proposed solution must be considered as part of the design, including the effects on the adjacent and surrounding tunnel sections, the Canal Tunnel as well as the shafts, cross passages and adits, with suitable mitigation proposed to maintain long term stability if adverse effects are anticipated. It should be considered that historically when one bore has been repaired the other bores then begin to deform as rock loading is altered, which should be accounted for in the staging of works. It should be noted that extensive SI has been undertaken in CP5 which should be used to inform the design. Previous stabilisation works have been undertaken at various locations see Standedge Tunnel Management Strategy (TMS) for further information.
Eastern	North & East	MVL3/40T Standedge Tunnel Implementation Stage 3	165217 Tunnel Renewals
Eastern	East Midlands	Millhill Broadway AFA footbridge	130874 Access For All Stn improvements
Eastern	North & East	ECM1/184DB (ALSO PMJ/79) G2 DN THROUGH BRIDGE	165433 Bridge Renewal
Eastern	North & East	LBE1/34B Stanningley Tunnel Bo	165747 Develop & install methods of stabilising lining & managing water ingress
Eastern	East Midlands	Alfreton AFA footbridge GRIP 5-8	130874 Access For All Stn improvements
Eastern	East Midlands	Beeston AFA footbridge	130874 Access For All Stn improvements
Eastern	North & East	DSN2/32 Reconstruct	170600 Reconstruct both decks
Eastern	East Midlands	Flitwick AFA footbridge	130874 Access For All Stn improvements
Eastern	East Midlands	Cricklewood AFA footbridge	130874 Access For All Stn improvements
Eastern	North & East	SPC8/68 Clay Cross Tunnel Bore	165281 Struture Renewal (RAM Arch)
Eastern	North & East	NEC1/17River Team	165290 Structure Renewal
Eastern	North & East	DSN2/31 - Recon of deck	170601 Reconstruct deck 2 or consider infilling
Eastern	North & East	PGL2/1B Wellington Street underbridge replace	165039 Option 1: Reconstruction of superstructure, or Option 2: Strengthening (ULS & SLS) and repairs to superstructure. Scheme development to include a feasibility study and option selection. Strengthening option to allow for future provision of a compliant ballast depth beneath sleepers, as currently < 20mm. Strengthening option to include for steelwork repairs (to severe section loss and make good rust jacking of diagonals) and targeted repainting. Strengthening option to include for steelwork repairs along whole length of bottom chords to restore integrity and web/flange connection. Strengthening option to include other minor maintenance items recommended in assessment and exam reports (e.g. bottom chord drainage). Strengthening of deck plates (substandard for HAW wagons) is excluded, as will be addressed by a future increase in ballast depth. Both options to include minor repairs to substructures (including works to rebuild end of wall PLG2/0/A2 to NW of bridge).
Eastern	North & East	SBF/4 SHIPLEY FIELDS	170563 ORIGINAL: Rewaterproof deck and repaint metal elements. Replace any damaged stone slabs. AMENDED: Reconstruct superstructure & re-habilitate substructure (FM 15/10/2015)
Eastern	East Midlands	St Albans AFA Footbridge	157320 Access For All Stn improvements (Main Works contract)
Eastern	North & East	LBE3/1 (ALSO DUH/40) PLANETREES ROAD	170591 Design & implement any strengthening / repair works identified as necessary from the Finite Element Analysis (results due March 2014); Provide new deck end drainage detail; undertake generic repairs to areas of spalled concrete soffit & painting to metallic parts (once waterproofing has enabled the deck to dry out) Undertake Brickwork Repairs including Re-pointing of Joints & Fractures Remove all Vegetation on and adjacent the structure (within 3m) and remove from site. Grub out Roots & make good any damage caused by the removal of such.
Eastern	North & East	MVN2/231 Thornes Lane	170553 Design & implement any strengthening / repair works identified as necessary from the Finite Element Analysis (results due March 2014); Provide new deck end drainage detail; undertake generic repairs to areas of spalled concrete soffit & painting to metallic parts (once waterproofing has enabled the deck to dry out) Undertake Brickwork Repairs including Re-pointing of Joints & Fractures Remove all Vegetation on and adjacent the structure (within 3m) and remove from site. Grub out Roots & make good any damage caused by the removal of such.
Eastern	North & East	NOC/29 (Also CFM/2) Common Road	172103 TRU PROPOSE TO RECON STRUCTURE FOR TRACK REALIGNMENT & OLE CLEARANCE However, should TRU reconstruction not go ahead in CP6, then require short term mitigation to ensure safety of weak bridge until future reconstruction: either implement single laning and traffic lights (based on NYCC proposal, DRAFT drawing CF/TS01), or further holding repairs/strengthening. Note minor holding repairs & FEA re-assessment being undertaken in 2017 via Works Delivery.
Eastern	North & East	SHB/52 CEMETERY ROAD.	170564 Raised to flag up possible future BG3 works
Eastern	North & East	MVN2/178 WOODHOUSE BRIDGE	170547 Infill spans 1 & 2 (metallic spans)
