

Building Information Modelling (BIM)

AmcoGiffen (Amalgamated Construction Ltd and Giffen Group Ltd) are committed to establishing BIM as a core part of our business management and project delivery processes. Building on our BIM Accreditation, we will collaborate with our workforce, Clients and supply chain to drive performance and value from working in a BIM environment.

Building Information Modelling (BIM) is a process of maximising the potential of today's technology and effectively integrating information throughout the lifecycle of a project. This philosophy enables the production and efficient exchange of accurate and comprehensive information for the design, construction, operation and maintenance of the assets we deliver.

AmcoGiffen's core values align perfectly with the principles of BIM, and we recognise that cultural and behavioural change is fundamental to the continuous improvement of its implementation across the business. Our existing Collaborative Management systems give us the tools to work effectively together to continuously develop our skills and experience in this field.

We are committed to integrating the principles of BIM into our working practices by:

- Aligning our processes to accord with BS8536, ISO19650 and PAS 1192-6 suite of documentation;
- Establishing a culture of collaboration within our organisation, our Supply Chain and Clients;
- Managing information in a consistent and transparent manner, whilst ensuring data security;
- Mitigating risks to improve outcomes in safety, the environment, programme and cost;
- Providing intelligent information-rich models that provide value to the construction, operation and maintenance of the Client's assets;
- Engaging the workforce and staff in the use and benefits of BIM tools.

Our objectives will be achieved by:

- Increasing awareness and understanding of BIM across our organisation, our Supply Chain partners, and our Clients;
- Assessing and committing to investment in technology, training and development of our staff so that they are capable of working and innovating in the BIM environment;
- Implementing BIM across our business on all appropriate projects, giving cognisance to scale and complexity;
- Sharing knowledge with our industry partners and working towards continuous improvement.

This Policy will be regularly reviewed and adapted accordingly to maintain pace with ongoing changes in this field.

John Booth

Managing Director
